DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-18 and 21, drawn to a method of identifying a function of a gene sequence, classified in class 435, subclass 6.
- II. Claims 19 and 20, drawn to a method of altering the expression of one or more cellular factors in a cell or altering the phenotype of a cell by overexpressing or inhibiting the expression of a gene sequence, classified in class 435, subclass 455.

The inventions are distinct, each from the other because of the following reasons:

Inventions of Groups I and II are biologically and functionally different and distinct from each other and thus one does not render the other obvious. The methods of Groups I and II comprise steps which are not required for or present in the methods of the other groups: detecting changes in one or more cellular factors in a first and second cell population of a cell type (Group I); overexpressing or inhibiting the expression of a gene sequence in a cell (Group II). The end result of the methods are different: the identification of a function of a gene sequence of interest (Group I); altering the expression of one or more cellular factors in a cell, or altering the phenotype of a cell (Group II). Thus, the operation, function and effects of these different methods are different and distinct from each other. Therefore, the inventions of these different, distinct groups are capable of supporting separate patents.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper. Further more, especially in instances where the classifications are the same, the non-patent literature searches required for each of these inventions are not co-extensive, hence said searches would be burdensome. Therefore, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
